SUMMARY

Frontend developer and team lead with hands-on experience building React and TypeScript interfaces for SaaS dashboards, logistics tracking, and institutional websites. Leads frontend delivery and reviews code for a small team while owning features end-to-end, from component architecture to shipping. A Mathematics background shapes a precise, structured approach to state management, edge cases, and problem decomposition, skills that transfer directly into writing reliable, well-reasoned frontend code. Comfortable working with distributed, cross-functional teams across design, backend, and product. Currently deepening full stack and testing capability alongside AI-assisted workflows.

TECHNICAL SKILLS

- Core: React.js, TypeScript, JavaScript (ES6+), Next.js, HTML5, CSS3
- Styling & UI: Tailwind CSS, Framer Motion (interactive/animated UI), Bootstrap, responsive & mobile-first design, semantic/accessible markup, Figma (design handoff & UI prototyping)
- State & Data: Redux, TanStack Table, REST API integration, CRUD-driven interfaces, async data handling
- Tools & Practices: Git/GitHub, npm, Vite, Bun, Vercel/Netlify deployment, cross-browser compatibility, performance optimization, agile workflows
- AI & Emerging Tech: LLM integration, prompt engineering, chatbot architecture
- Currently Deepening: Zustand, Redux Toolkit, Jest (component testing), web accessibility (WCAG basics)
- Remote Collaboration: Slack, Zoom, Google Meet, async standups, sprint coordination, timely reporting across distributed teams
- Cross-Functional Collaboration: working directly from Figma designs, coordinating with backend engineers on API integration, and aligning with product managers on feature scope and priorities

EXPERIENCE

Frontend Engineer, Team Lead — AxiomVault AI *Jan 2026 – Present*

- Lead frontend delivery for a B2B SaaS platform, translating product and design requirements into a working sprint plan and reviewing every teammate's code before merge.
- Architect enterprise dashboards and anomaly-detection interfaces handling continuous, real-time data, building reusable component patterns so new views can be assembled quickly without duplicating logic.
- Own state management across complex, data-heavy workflows using Redux, keeping the UI predictable even as multiple data sources update simultaneously.
- Guide the team through sprint cycles day to day, unblocking teammates on tricky bugs, aligning on component structure before work starts, and keeping delivery on schedule.
- Built with Vite for fast local development and iteration, and use Bun on select projects for quicker script execution and dependency installs.

Financial Operations & ERP Specialist — PacknPay International Limited *Oct 2025 – May 2026*

- Managed day-to-day financial operations and reconciliations on Odoo and Zoho ERP systems, including invoicing, cash handling, and accounts receivable for a multi-driver logistics operation.
- Served as a key point of contact during the company's ERP migration from Odoo to Zoho, helping resolve system issues and supporting coworkers through the transition.
- Applied that experience with structured, high-volume data systems directly to how I now design dashboards for financial and operational data, understanding firsthand what the end user actually needs from the interface.

Frontend Web Developer — Premium ESOWP Limited *Apr 2023 – Feb 2024*

- Built and shipped 10+ responsive websites for corporate and institutional clients using HTML5, CSS3, and modern JavaScript, working directly with clients to translate their requirements into working sites.
- Refactored older codebases to modern standards and cut production time per site from around 3 hours to 30 minutes across 200+ outputs, by building a reusable template system rather than starting each site from scratch.
- Ensured mobile-first responsiveness and cross-browser compatibility across every deployment, testing on real devices rather than emulators alone.

Independent Frontend Developer — Freelance *Oct 2022 – Mar 2023*

- Handled client-side development end-to-end for independent contracts, from initial layout and component build to API integration and final deployment.

- Cut load times by roughly 30% through performance optimization and better data handling, including reducing unnecessary re-renders and optimizing asset loading.
- Communicated directly with clients throughout each project to manage scope, timelines, and revisions without a project manager in between.

Frontend Developer Intern — Digitalnotion Systems *2021 – 2022*

- Built dynamic, mobile-first web applications under senior developer guidance, learning core frontend fundamentals from the ground up.
- Practiced usability testing and cross-device debugging on every project, building the habit of checking real-world behavior rather than assuming code that compiles is code that works well for users.

FEATURED PROJECTS

- AI Fraud Detection Dashboard (AxiomVault) — Built the real-time visualization layer for an enterprise fraud-detection tool, surfacing anomalies as they're flagged through clear charts and highlighted states rather than raw data tables. Owned component architecture and state management for continuously-updating financial data, keeping the interface responsive and accurate under live load.
- SwiftMeal Logistics Platform — Delivery tracking portal with live shipment updates, route mapping, and CRUD-driven order management, built with careful async state handling so live data never blocks the interface.
- Beauty Enterprise E-Commerce (in progress) — E-commerce interface with dynamic product filtering and a full CRUD-based shopping/checkout flow.
- Commercial Institutional Platforms — Websites for schools and businesses including Arch Angel Gabriel S.S, St. Mary's College, Gray Mata Solicitors, and Switchtech Energy.

EDUCATION

B.Sc. Mathematics — Nnamdi Azikiwe University, Awka | Oct 2018 – Apr 2023

Coursework in Discrete Mathematics, Algorithms, and Optimization directly informs how I reason through state logic, edge cases, and performance trade-offs in frontend code.

CERTIFICATIONS & RECOGNITION

- Software Development, National Information Technology Development Agency (NITDA) 3MTT Programme — Dec 2025
- Frontend Development Assessment, TG Nexus Platform — Tobams Group — Aug 2026
- Professional Certificate in AI & Machine Learning — MAI Academy — Jul 2026
- Professional Certificate in Leadership & Management — MAI Academy — Aug 2026
- 1st Place — Afriment Engineering Competition
- Certified Frontend Developer — Digitalnotion Systems
- Introduction to Cybersecurity — Cisco Networking Academy
